

# Maximizing the Full Potential of Your Water

Guaranteed Results or Your Money Back

***Official Global Distributor***

# HydroMaxx Pro

# Golf Course

Copyright Hood Canal Brokers, Inc 2024

# GUARANTEED MINIMUM RESULTS

20% Reduction in Water Use

100% Reduction in Surfactant Use

20% Reduction in Fertilizers Use

20% Increase in Plant, Tree, Shrub and Flower Growth and Yield

Healthier, More Durable Turf with Faster Rejuvenation

Reversal and Elimination of Scaling in Water System

Increase Equipment Life 5X or More

*These are the written guaranteed minimum results; customers report even greater improvements up to 50%*

# What Is The HydroMaxx Pro Water System

## It's a GAME CHANGER!

The HydroMaxx Pro System is not a water softeners or reverse osmosis systems.

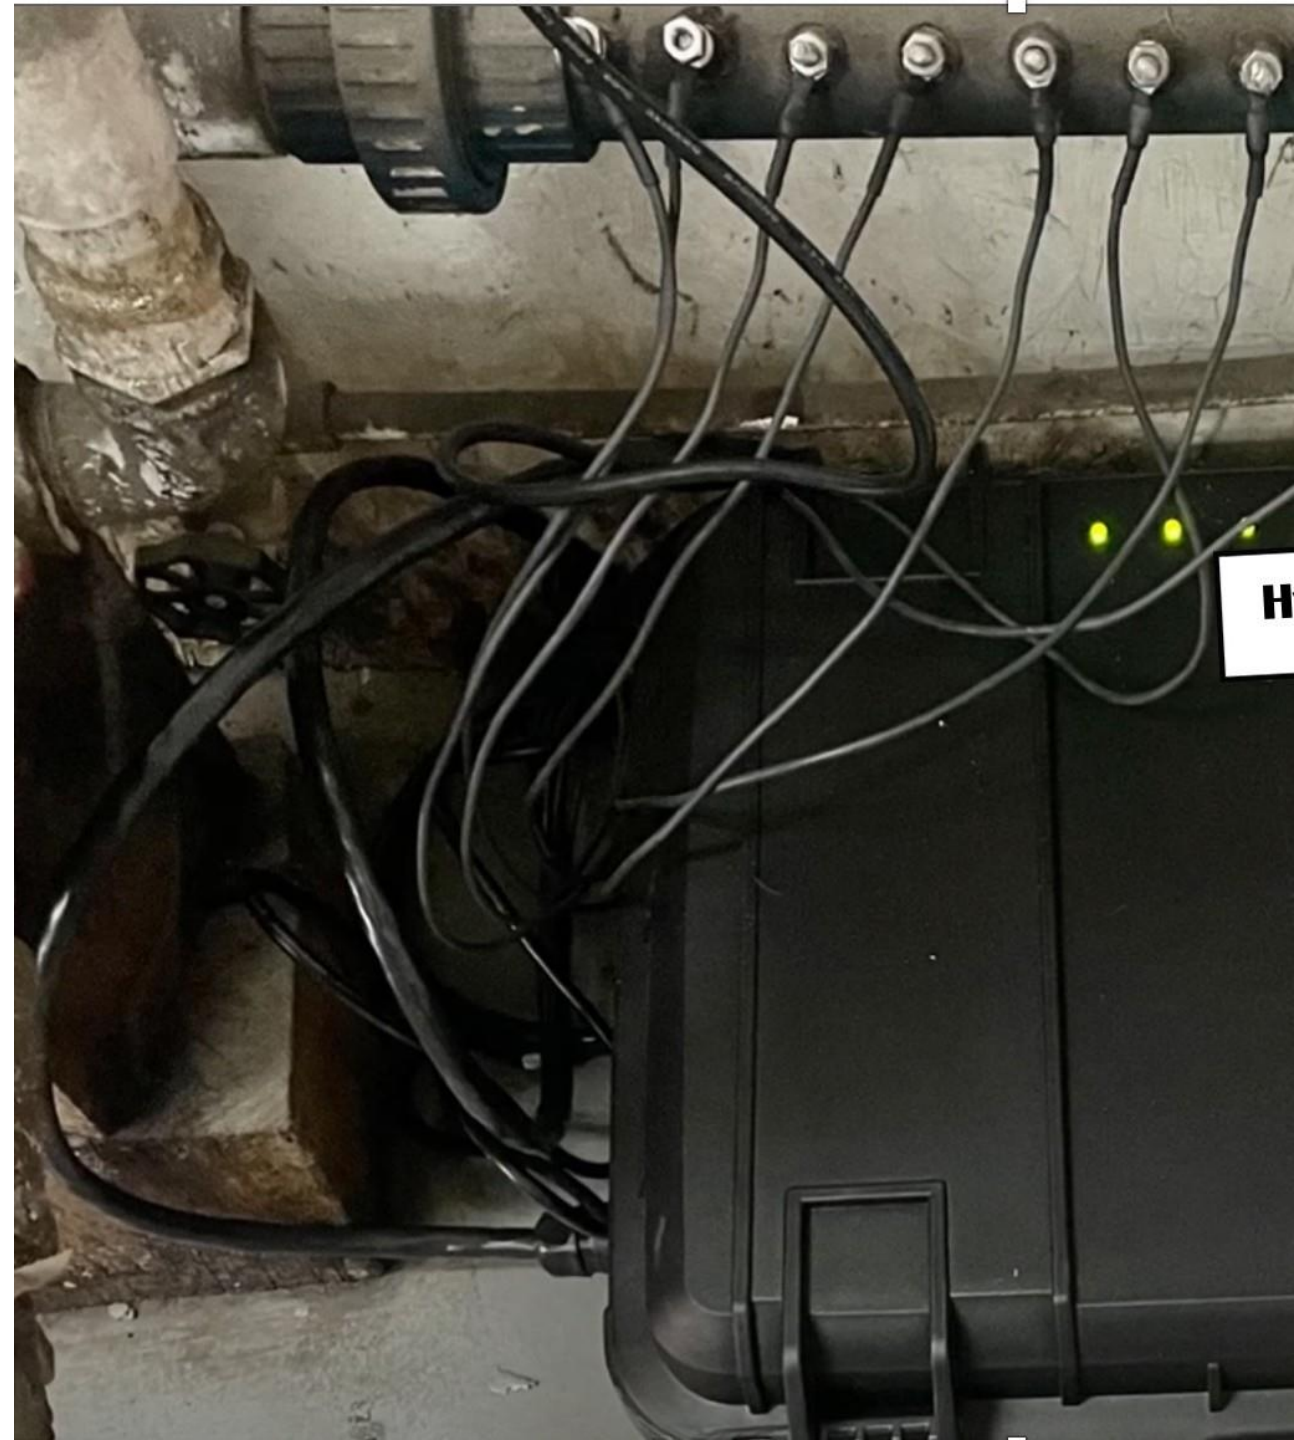

Functioning as a patented electronic device, the HydroMaxx Pro water unit interacts with the ion structure of water to attain an optimal water composition.

The unit subjects the water passing through the water supply pipe to a controlled electrostatic field through cables and stainless steel probes, where a patented wave treatment makes water wetter, enhances taste, diminishes

odor, reduces scale, and addresses various significant issues in water sources. All systems are custom designed following extensive testing of water and soil. This cutting-edge technology empowers golf courses to enhance efficiency and cost-effectiveness while fostering the growth of robust, healthier plants. In essence, we assist in achieving more with fewer resources. By curbing input costs, boosting production yields, ensuring worker safety, and reducing resource consumption, we contribute to both local and global environmental well-being.

In use at hundreds of golf courses, including some of the most famous. References supplied upon request

# The HydroMaxx Pro Water System

Repeated tests show that 40-60% of the water used for irrigation evaporates BEFORE it can be used by the turf or plants.

This occurs in both arid and moderate climates.

Soils treated with HydroMaxx Pro water have increased colloidal properties therefore the need for water and fertilizer is significantly reduced.

Since the plant materials are utilizing the water more efficiently, watering frequency is reduced.

Negatively charged water decreases insect populations, and the HydroMaxx Pro system can be customized to chase off insects that have been identified as having a negative impact to a given operation.

The golf course saves on water, chemicals, fertilizer, labor and lower operating costs with healthier plants.

The process also allows the free electrons to capture salts in the water and render them less likely to cause salt burn. The free electrons take the salts to the subsoil, well below the root structure, and return them to the natural water table.

As a result, plants will grow with fewer, if any, problems relating to excessive salt in the water. Local soil makeup will determine how far into the subsoil the salt content can go, but the unit will be effective regardless of your soil composition.

# HydroMaxx Pro and Transpiration

- The water of the HydroMaxx Pro system clears leaf surfaces of salt accumulation for better water, mineral and nutrient uptake in the roots. Transpiration through the plant leaf is affected by the reduction of hydrogen bonding.
- As the hydrogen bond of the water has been reduced, transpiration may take place faster resulting in greater uptake of more water and nutrients.
- An additional result is a greater root, stem and leaf turgidity resulting in fuller plants.
- Since the unit's water aids in eliminating the salts on leaf surfaces, more photosynthesis can take place resulting in stronger growth.

# Healthier Soil, Roots and Grass

As a result of the surfactant “wetter water” effect, soil percolation is much greater and more efficient. The water of this unit helps keep the root area cleared of salts which will result in greater water, nutrient and mineral uptake.

As a result of surrounding the water, minerals, nutrients, etc. with the negative charge, these items are separated and stabilized so they are more available to the plant in a form that can more readily be used.

# Crystal Clear Water

HydroMaxx Pro reverses and eliminates algae growth including blue-green variety (Cyanobacteria).

Keeps ponds clear and odor free

Drives off Pests Including Flies, Fire Ants and Nematodes

Addresses other significant water related issues.

# Before and After Revere Golf Course

**Before**

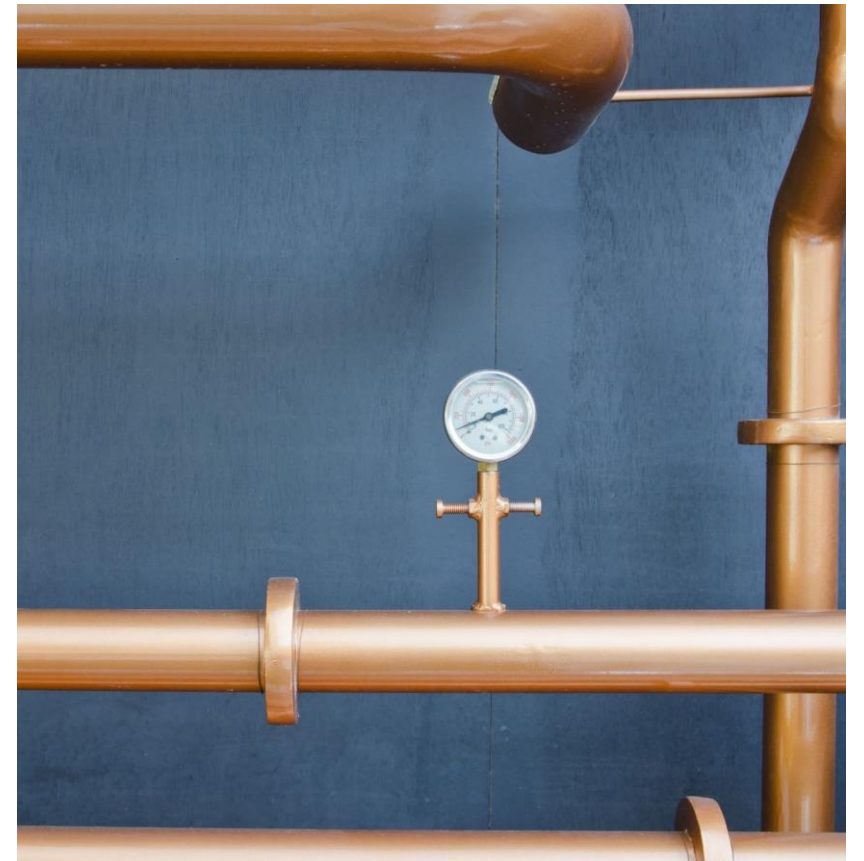

**After**

# Valves, Pumps, Pipes and Spray Heads

- Clears and removes existing scale from pipes, pumps and related equipment and stops hard water scale from forming.
- Standard maintenance and repairs on equipment are reduced and customers see much less downtime using the system.
- Valves, pipes, spray heads, sprayers and other equipment have much longer lives, up to 10X documented, using the HydroMaxx Pro System, which decreases monetary costs to users and decreases environmental costs.
- All these benefits translate into huge money and time savings, while increasing efficiency throughout the operation.

# HydroMaxx Pro Water System Applications

---

- The HydroMaxx Pro systems are designed specifically for the needs of our customers.  
Systems are created based off water and soil test results, industry segment needs, specific production needs and any issues our customers may need to overcome

# Testimonials

## *Golf Course Maintenance*

During my 18-year career as a golf course superintendent, including Spy Glass at Pebble Beach, I installed four HydroMaxx Pro water conditioning systems, in four geographically different locations: coastal, desert, altitude, and Mediterranean climates. In all four cases, the installation proved to be a game changer, whereby irrigation performance was improved with reduced surface tension, water use was lowered due to improved efficiency, and turf grass quality was superlative from the beginning to the end of every season. Moreover, at all four locations, my water source and its quality were never similar, ranging from recycled water, high bicarbonate well water, potable, to ultra-pure snow melt. In all four locations, I was able to tweak the water with the negatively charged frequencies, so the hydrogen bonding in the water source was broken and water was better able to flow freely from turf to soil. For the

price of a new grinder and the cost to power a light bulb, you can make a dramatic impact on your entire golf course with a maintenance free HYDROMAXX PRO unit.

# Testimonials

## ***Golf Course Maintenance***

*We reduced water and fertilizer and eliminated surfactants from day one. Our course is thriving and the product is working exactly as they said it would. HydroMaxx Pro cleaned up the water in our ponds in around a few months with no added chemicals. We just plugged it in and let it do the work for us! We couldn't be happier with the product. In fact we just added a second unit for our course and purchased a third for a course we manage!*
