

Maximizing Your Waters Full Potential

GUARANTEED RESULTS OR YOUR MONEY BACK

# HydroMaxx Pro

## Egg and Poultry

Feed Crop Production

Bird Development and Egg Production  
System Improvements

HYDROMAXX PRO – *Official Global Distributor*

## FEED CROPS

**20% Reduction in Water Use on Crops**

**20% Reduction in Fertilizers Use**

**20% Increase in Crop Yield**

**Improved Nutritional Quality of Feed**

## POULTRY

**Faster Weight Gain**

**Less Water Required.**

**Less Feed Required**

**Lower Mortality Rate**

**Improved Egg Production, ( *Size, Weight and Number* )**

## SYSTEM

**Eliminates Deadly Viruses and Bacteria**

**Reduces Fly Population by 70% and More**

**Eliminates Scaling in Water System**

**Water System Useful Life Extended by Many X**

# What Is The HydroMaxx Water System

## It's a GAME CHANGER!

The HydroMaxx Pro System is not a water softeners or reverse osmosis systems.

Functioning as a patented electronic device, the HydroMaxx Pro water unit interacts with the ion structure of water to attain an optimal water composition.

The unit subjects the water passing through the water supply pipe to a controlled electrostatic field through cables and stainless steel probes, where a patented wave treatment makes water wetter, enhances taste, diminishes

odor, reduces scale, and addresses various significant issues in water sources. All systems are custom designed following extensive testing of water and soil. This cutting-edge technology empowers golf courses to enhance efficiency and cost-effectiveness while fostering the growth of robust, healthier plants. In essence, we assist in achieving more with fewer resources. By curbing input costs, boosting production yields, ensuring worker safety, and reducing resource consumption, we contribute to both local and global environmental well-being.

In use at hundreds of golf courses, including some of the most famous. References supplied upon request

# POULTRY

## HOW IT WORKS

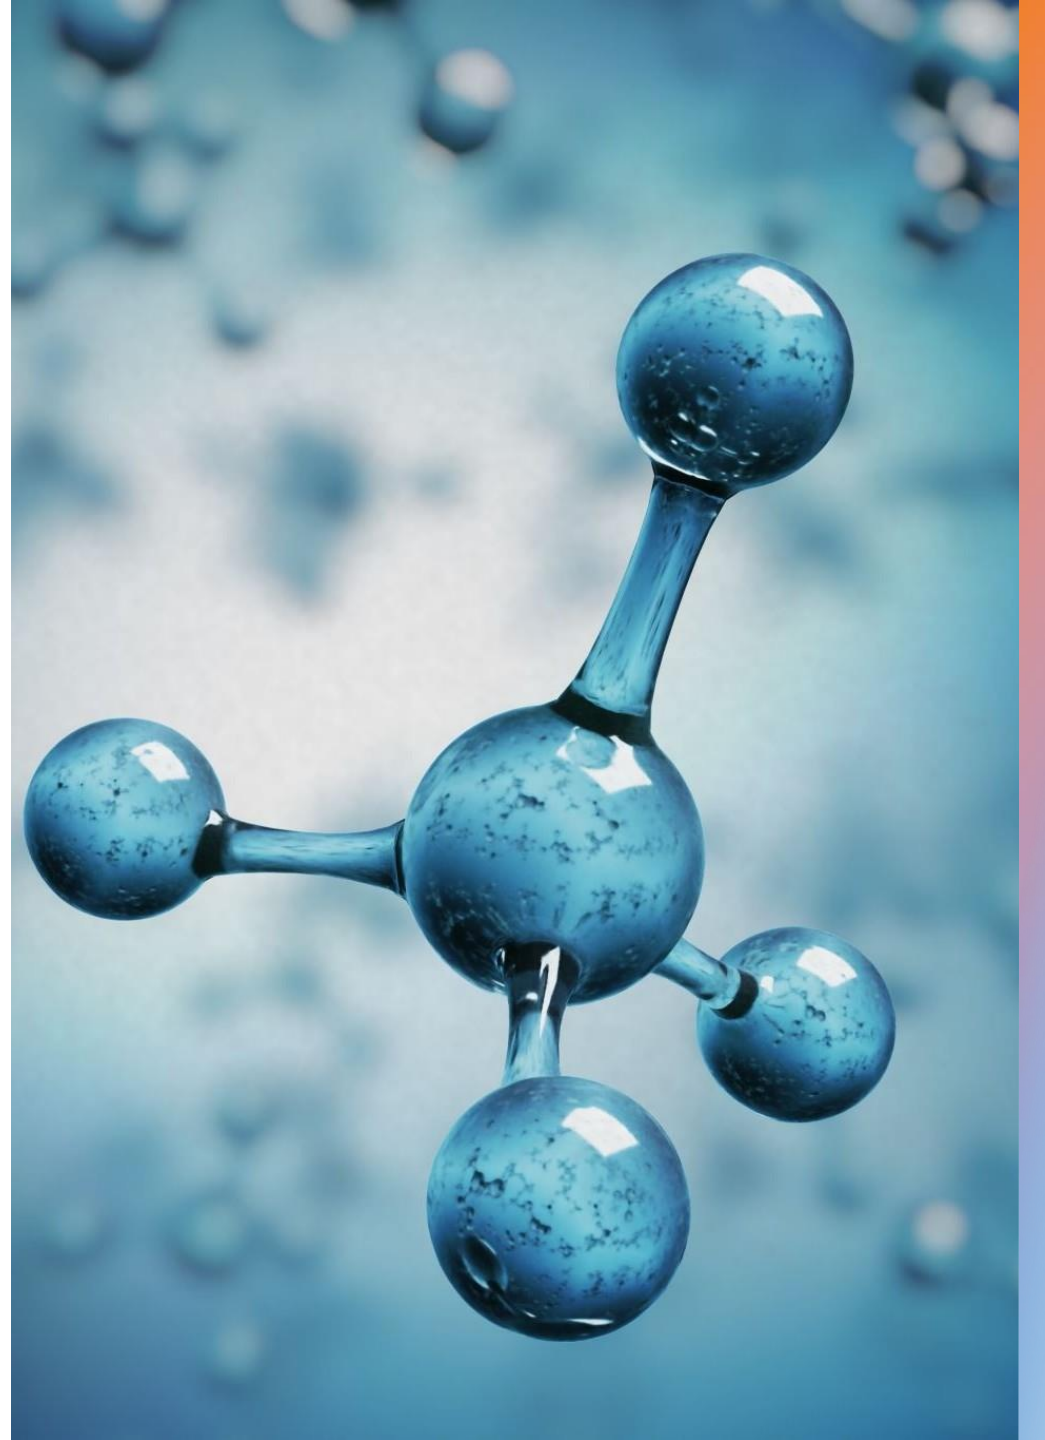

The electron transport chain uses cytochromes to take the electrons from the broken-down food (reagent), which leads to the production of energy and water. By providing the organism with a free electron source previously unavailable for cell metabolism, the HydroMaxx Pro water provides extra energy in the form of raw electrons to drive the electron chain. This helps overcome any inhibitory factors to this process, which amounts to adding free fuel to the organism. The HydroMaxx Pro treated water addresses poor digestion, faulty enzymes, inefficient or slow metabolism depleted food chain, including inhibiting factors in water because of scale, hardness, improper balance of dissolved solids or reagents in the water itself. This process also helps re-balance the salts in a correct manner for proper cellular metabolism or homeostasis.

# POULTRY

Free electrons act as free radical scavengers (as free radicals are electron deprived), therefore neutralizing the negative impact of the free radicals, which prevents the cell damage related to the presence of free radicals. This process allows the free electrons to coexist with the dynamic equilibrium potential of water, no matter how pure the pretreated water source.

In addition, the HydroMaxx Pro unit puts minerals like calcium, salt and iron into suspension, which allows these minerals to move through pipes and pump systems without attaching to the pipes, pumps, soils, plants etc. This makes the minerals benign to plants and animals, and also cleans out the existing scale from pipes, pumps, driplines, sprinklers, or anywhere hard water generally attaches to. This all happens using ONE HydroMaxx Pro unit with a 110-volt power source: no chemicals to add, filters to change or new parts to purchase.

# POULTRY

## Example Results

- A farmer installed a HydroMaxx Pro unit on his main water supply and a dual box on the drinking water for his chickens. His local water supply runs from 3,600-3,800 PPM of salts and was never fed to the chickens because of the salts. He hauled an average of 17,000 GPD of sweet water for the chickens' drinking water.
- After the HydroMaxx Pro unit was installed, he stopped all sweet water and gave the chickens the local raw water. He saved the cost of the sweet water for the 120,000 chickens
- The mortality rate went from about 8% to less than 1%.
- His chickens grew to selling weights 5 days ahead of normal, weighing 2 kilograms in 35 days instead of 40-42 days, which saved him several tons of feed.

# System

## Valves, Pumps, Nozzles, Pipes and Spray Heads

- Valves, pipes, spray heads, spray equipment and other equipment have longer lives using the HydroMaxx Pro System, which decreases monetary costs to users and decreases environmental costs to the general population as a whole.
- Documented improved life span of equipment of 5 X and more
- Standard maintenance and repairs on equipment are reduced and customers see much less downtime in water related equipment using the unit. All these benefits translate into huge money and time savings, while increasing efficiency throughout the operation.

# Crystal Clear Water Retention Areas

Reverses And Eliminates Algae Growth Including Blue-Green Variety (Cyanobacteria).

Eliminates Growth Of Viruses, and Bacteria Including Avian Flu

Keeps Ponds Clear And Odor Free

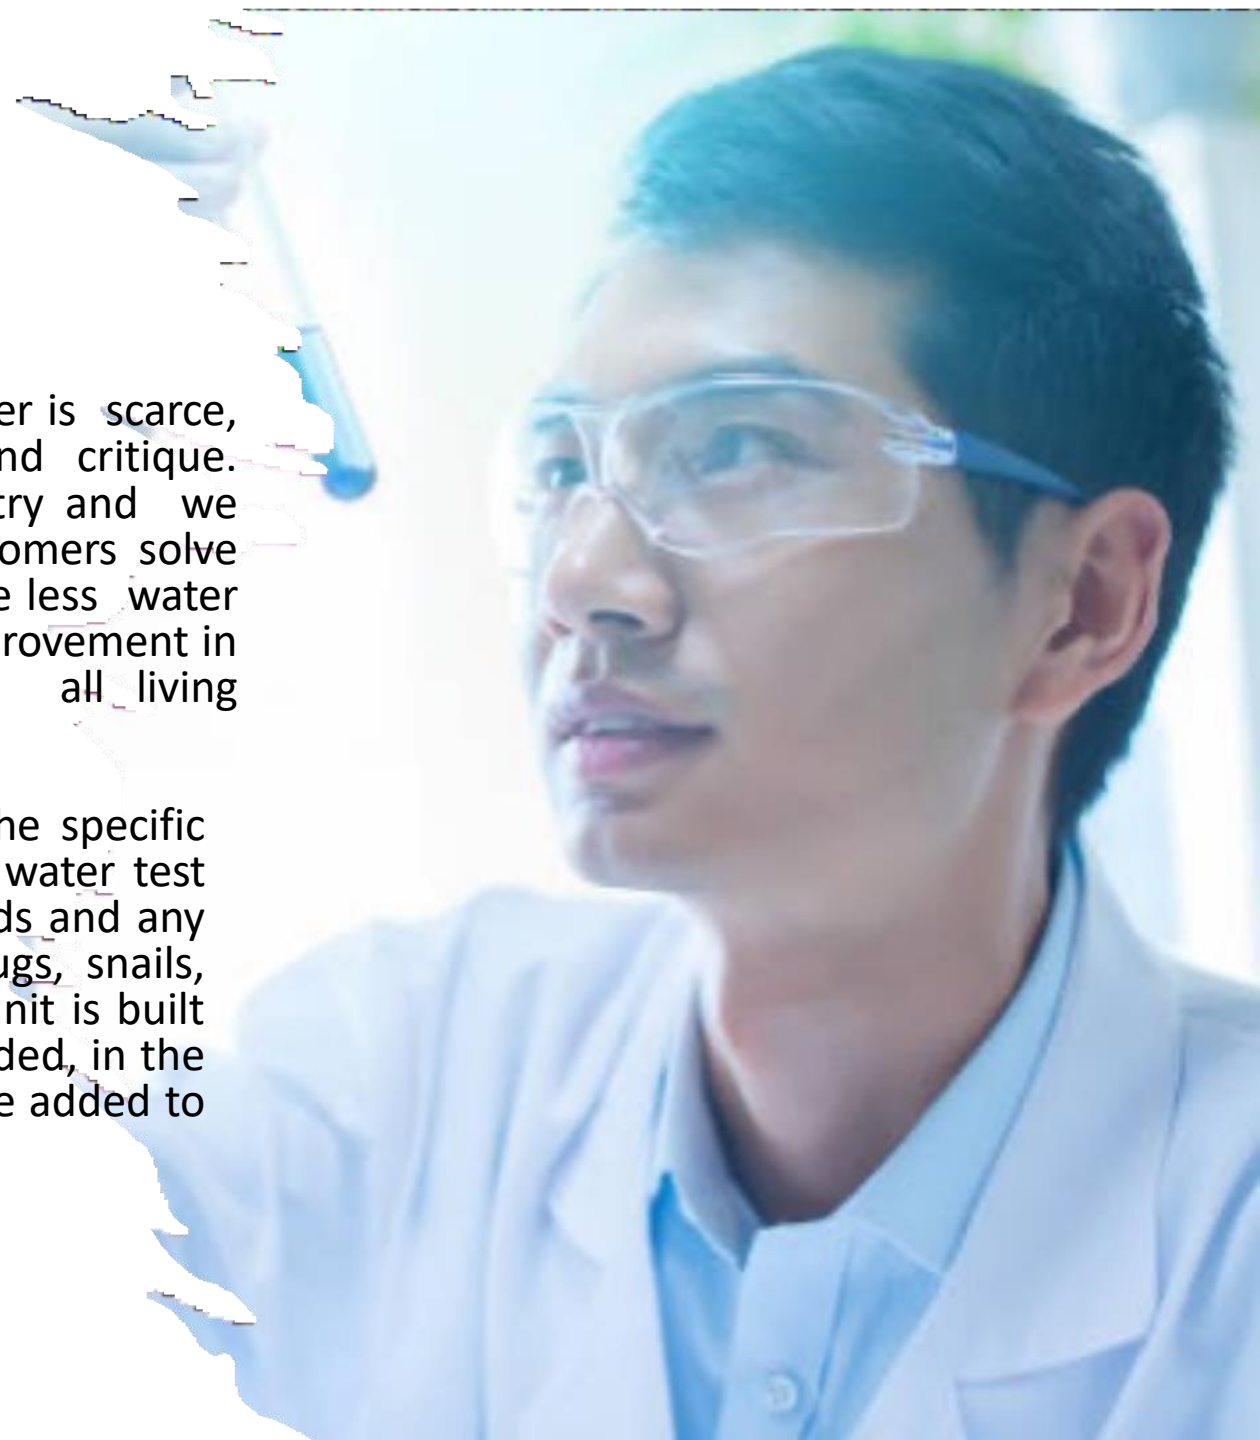

Facilitates Water Recycling

Addresses Other Significant Water Retention Area Issues.

# HydroMaxx Water System Application

- Water is used in almost every production operation. Water is scarce, expensive and its uses are under constant observation and critique. We are excited to take on any challenge, in any industry and we promise best in class support in helping potential customers solve their water problems the benefits we see consistently are less water surface tension, removal of hard water scale deposits improvement in water taste/odor and biological health that benefits all living organisms.
- The HydroMaxx Pro systems are custom designed for the specific needs of our customers. Systems are created based off water test results, industry segment needs, specific production needs and any issues our customers are trying to overcome (bugs, slugs, snails, algae, hard water scaling, viruses). The HydroMaxx Pro unit is built so that additional frequencies can be added later as needed, in the case that new issues arise, or new crops/opportunities are added to an operation.

# Summary

Reduce Water Requirement for All Crops by 20% and More

Reduce Fertilizer Use by 20% and More

Improved Crop Yield by 20% and More

Higher Egg Production

Reduce Water and Feed Requirements

Lower Mortality

Water Related Equipment Life Double and More

Clean Clear Water Retention Ponds

Cost Saving Increased Output
